FOREWORD

SINCE the publication of the original four volumes of this work in 1939 and 1940, the entire stock, together with the copyright, has been transferred to the Zoological Society of London. Furthermore, a fund has been created, known as the Neave-Lloyd Nomenclator Zoologicus Fund, which it is hoped will, if it is sufficiently supported by zoologists, provide sufficient to publish a further volume every ten years, the present one being the first of the series.

February 1950.

EDITOR'S PREFACE

The present volume, which has been prepared on the same lines as the original work, attempts to include all the generic names in zoological literature, over 18,000 in number, between the years 1936 and 1945 inclusive, together with a few hundred names omitted previously.

Owing to the difficulties and delays concerned with the dispersal of literature arising out of the World War, there are a few cases in which it has not been possible to see the original work and give the complete reference. These are indicated by a ‡ preceding the name. A few names have, no doubt, been omitted altogether. These, however, will be included in the next volume when the time comes.

Readers should bear in mind that it will frequently be necessary for them to use both the present work and the earlier volumes in conjunction in order to obtain the whole history of a given name and its homonyms.

In the preparation of the work, I have received much assistance from Mr. G. B. Stratton, Librarian, and the staff of the Library of the Zoological Society of London, and, as on the previous occasion, am deeply in debt to Miss Rachel Davenport who has given great assistance with the names of insects and in reading the proofs of these. I have also to thank Dr. W. J. Hall, Director of the Commonwealth Institute of Entomology, for enabling me to use the Institute's Generic List of insects, as well as several members of the staff of the British Museum (Natural History) for help and advice.
